

## **MHD Small Group Symptom Snapshot Assignment Summary**

Students will provide a written response to the following questions and submit on Sakai by 5pm on their assigned small group presentation day.

- ☐ What is your symptom? Which small group session featured your symptom in a case?
- ☐ What strategy did you use to find appropriate resources to explain the pathophysiology behind your symptom? Please be as specific as possible.  
*“Google” searches are not acceptable*
- ☐ Why did you use this search strategy?
- ☐ Cite 1-3 sources you used to define the pathophysiology behind your symptom  
*Resources directed to the general public are not acceptable*
  - If you used a textbook or article, please provide a citation
  - If you used a website or online database, please provide a citation
  - If your search was assisted by online tools, such as an AI, please follow the guidelines provided in the SSOM Academic Policy Manual
    - *AI search tools are not a substitute for your own critical thinking and writing skills.*
    - *Suggestions provided by generative AI tools (e.g. ChatGPT, Google Bard, Microsoft Bing, DALL-E, LaMDA, etc.) should be used as a guide and not a replacement for your own ideas and writing.*
    - *It is important to carefully review and edit the text generated by AI tools and to ensure that all sources are properly cited – and are even real sources, as generative AI may create its own sources, leading to disinformation.*
    - *The Stritch School of Medicine (SSOM) will ask students to disclose if assignments were completed, in part or all, through generative AI tools. Failure to disclose the use of generative AI tools will be a Student Code of Conduct violation and result in review by that course/clerkship/elective director and the SSOM Student Promotion Committee.*
    - *There is no universally-agreed method for citing AI tools at this time. Please utilize the APA style guide to properly cite AI tools*
